Description

Following her series of dialogues with Gaia, our own planetary logos and inspired by the work of the astro-physicist Dr John Gribbin, Murry Hope has reached out even further into space and time and established a 'field to field' communication with the 'Controlling Intelligence' behind our own Universe! Subjects covered by her information from this source to date include – there are an infinite number of universes, all functioning at different frequencies; all universes are conscious beings fully aware of their cosmic functions; the role played by time in our own universe's present expansion and eventual contraction and the fact that our universe is actually a 'black hole' in the centre of an even larger universe.
